Dear Quillstone Payments Hiring Team,

I am applying for the Machine Learning Engineer – Customer Support AI role. I have more than five years of experience across machine learning and NLP, including building and operating production systems for document classification and working with customer-support complaint data. I hold an MSc in Computer Science and bring strong Python experience across NLP, model development and production ML systems. I am especially interested in applying that experience to AI tools that help merchants get answers quickly and support teams route and handle requests effectively.

At Slavonica Document AI, I developed and shipped a document-classification system for OCR-processed invoices, contracts and decisions. It reaches 94% accuracy and a 0.91 macro F1 across 23 classes, processing approximately 15,000 documents per day. I fine-tuned transformer models with PyTorch and Hugging Face, served them as FastAPI services in Docker on Azure and used MLflow for experiment tracking, model registry and production MLOps. I also implemented production-quality monitoring; when an OCR change reduced accuracy by nine percentage points, monitoring helped identify the issue and support remediation within a week.

My earlier work at Baranjska kreditna banka included classifying customer complaints into 11 topics for weekly reporting to customer-service management. I also built a weekend RAG question-answering prototype over Croatian laws, using sentence-transformers, FAISS and an open-weight LLM through an API; it was a prototype rather than a production system. Alongside this work, my PhD research focuses on Croatian-language processing, including named entity recognition, and I have built an annotated dataset of 4,000 legal and administrative documents.

Quillstone's focus on customer-support automation and its emphasis on ownership, teamwork and learning from mistakes appeal to me. I would welcome the opportunity to bring my Python-based production ML, model-serving, monitoring and text-processing experience to systems that answer merchant questions and route support requests.

Kind regards,
Petra Zlatarić-Novosel
