Dear Verdane Care Hiring Team,

I'm a full-stack developer with professional experience building web applications since 2014, specialising in React and TypeScript alongside Node.js, NestJS and PostgreSQL. I'm interested in the Full-Stack Engineer role because it brings together end-to-end product development and a focus on accessible, thoughtful experiences for patients.

At Älvgrind Fintech, I build onboarding features across the frontend and backend for KYC flows and other sensitive customer journeys. I developed a Swedish BankID verification flow with QR-code and same-device journeys, error handling and retries; after an A/B test with 10% of traffic, onboarding conversion increased from 61% to 74%. I also built a secure document-upload flow using S3 presigned URLs and malware scanning. This work has given me practical experience delivering sensitive customer-facing flows with care.

I have improved accessibility against WCAG 2.1 AA and reduced mobile Largest Contentful Paint from 4.1 seconds to 1.9 seconds. I also write automated tests with Jest and Playwright, work closely with designers in Figma, and have contributed to an incremental Express-to-NestJS migration. I use Jest for unit testing and Playwright for end-to-end testing, and I have worked with Git-based delivery workflows through GitHub Actions. My broader delivery experience also includes Next.js, AWS, Docker and Storybook. Verdane Care's emphasis on "Patients first," "Privacy by default," and accessible healthcare software connects well with the kind of careful, user-focused product work I've done.

I would welcome the opportunity to discuss how my experience could contribute to Verdane Care's Patient Experience team. English is my fluent work language at Älvgrind. Thank you for your consideration.

Kind regards,

Oskar Haddad-Lindqvist
