Dear Verdane Care team,

I'm applying for the Full-Stack Engineer role on the Patient Experience team. I have 12 years of professional experience building web and mobile applications, and my strongest areas are React and TypeScript. In my current role at Älvgrind Fintech, I build user-facing onboarding features end to end, using React and TypeScript on the frontend and Node.js/NestJS with PostgreSQL on the backend.

My recent work includes delivering a Swedish BankID identity-verification flow and a secure document-upload feature. I A/B tested the identity step on 10% of traffic before rollout, helping increase onboarding conversion from 61% to 74%. The document-upload flow used S3 presigned URLs, malware scanning in Lambda and status updates through SQS. These projects have given me experience building user-facing flows where authentication, secure document handling and reliable processing of sensitive customer information matter.

I'm interested in bringing that experience to Verdane Care's patient-facing products. Your focus on "Patients first," "Privacy by default" and simple, accessible experiences is especially relevant to the kind of thoughtful product work described in the role. I also contributed to an incremental Express-to-NestJS migration and served as acting team lead for four months in 2024, supporting one-to-ones and sprint planning while helping the team continue delivery.

Thank you for considering my application. I'd welcome the opportunity to discuss how my experience could contribute to the Patient Experience team.

Best regards,

Oskar
