Dear Verdane Care hiring team,

I'm applying for the Full-Stack Engineer role in your Patient Experience squad. I'm a full-stack developer with professional experience since 2014, and frontend development is where I'm strongest. The opportunity to work on patient-facing features at a product company, and see the impact of that work over time, is particularly appealing to me.

At Älvgrind Fintech, I develop onboarding features with React, TypeScript, NestJS and PostgreSQL. I built a BankID verification step supporting QR code and same-device flows; after an A/B test and full rollout, onboarding conversion increased from 61% to 74%. I also developed a secure document-upload flow using S3 presigned URLs, virus scanning in Lambda and SQS, and contributed to an incremental migration from Express to NestJS.

Earlier, at Sjöbris Digital, I led a two-developer project to build a React Native ferry-ticket app that lets customers buy and show tickets offline and has around 50,000 downloads. I built most of the app while the other developer handled the payment backend. At Älvgrind, I also served as acting team lead for four months, coordinating sprint planning and conducting one-to-ones.

I'd welcome the chance to bring my experience building customer-facing applications to Verdane Care's patient experience team. Thank you for considering my application; I'd be glad to discuss how I could contribute.

Best regards,
Oskar
