Dear Corvale Mobility Hiring Team,

I am writing to apply for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I bring 10 years of infrastructure experience, including six years operating Kubernetes platforms on AWS, and a track record of shaping reliable cloud platforms that help product teams take services from development to production.

In my current role as Senior Platform Engineer at Tallybrook, I lead a five-person platform team responsible for an AWS EKS environment spanning eight clusters, approximately 350 services and three regions. I built an internal developer platform using service templates, Argo CD and Crossplane-based self-service provisioning, reducing the time to take a new service to production from around two weeks to under one day. I have also introduced SLOs and error budgets for critical services and participate in the incident commander rotation. This experience aligns well with Corvale's need to build and operate a dependable cloud platform while supporting backend teams with services that are observable and practical to run.

My earlier work at Brightwater Games included operating AWS infrastructure for game backends serving titles with up to 1.2 million daily active players, maintaining infrastructure as code across approximately 40 Terraform modules, and supporting load testing and capacity planning for launches. Across these roles, I have led technical work, improved operational practices and helped teams make infrastructure decisions with reliability and maintainability in mind. I would bring that experience to the design and delivery of the train-to-cloud platform, working collaboratively across infrastructure and backend teams as the new fleet takes shape.

Corvale's focus on engineering-led teams that own systems end to end is particularly relevant to the way I approach platform work: build useful foundations, make services observable, and establish clear processes for operating them. I would welcome the opportunity to discuss how my AWS, Terraform and platform engineering experience could contribute to the Fleet Connectivity team.

Yours sincerely,
Nadia Brennan-Aziz
