Dear Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I'm a QA automation engineer with seven years' experience, including two focused on CI/CD, test environments and build tooling.

At Odrava Health, I own GitLab CI pipelines for three teams and built short-lived merge-request environments with Helm on a shared Kubernetes cluster. I cut pipeline time from 38 to 14 minutes and runner costs by about 30% through parallelisation, caching and test-stage changes. I wrote an onboarding CI guide and mentored two interns.

Alongside work, I operate a three-node Linux k3s homelab with Argo CD, Prometheus, Grafana, Loki and Traefik; I configured cert-manager for TLS in my k3s homelab. I provisioned a Hetzner VPS with Terraform in a personal Terraform project and explored AWS through free-tier EC2 and S3 basics. At Odrava, I have namespace-level access to a shared Kubernetes cluster, building Helm test environments rather than administering it. I'm interested in bringing my hands-on infrastructure automation, cloud-environment, and observability experience to Corvale's fleet connectivity work.

Corvale's engineering-led approach appeals to me; I'd welcome the opportunity to discuss contributing to the Fleet Connectivity team.

Thank you for your time and consideration.

Marta Kowal-Brandt
