Dear Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I bring 10 years in infrastructure engineering, including six years operating Kubernetes on AWS.

At Tallybrook, I'm technical lead of a five-person platform team operating AWS EKS across eight clusters and three regions. I built an internal developer platform with Go and Python templates, Argo CD, and Crossplane, providing self-service RDS, SQS and S3 to all 14 product teams. This cut new-service production time from around two weeks to under one day. I also led an SLO programme with product leadership that reduced on-call pages by approximately 60%.

At Brightwater Games, I managed AWS infrastructure through approximately 40 Terraform modules and Atlantis workflows, and used k6 load testing and capacity planning to analyse system limits and prepare game backends for major launches. Earlier in my infrastructure career, I managed approximately 600 Linux servers for hosting customers and handled customer incidents on call. I would bring hands-on AWS infrastructure operation, including AWS IAM, Terraform-based delivery, and platform system design grounded in building self-service RDS, SQS and S3 provisioning for all 14 product teams to Corvale's train-to-cloud services, designing dependable, observable systems for production.

I'd welcome the opportunity to discuss how my experience leading platform initiatives, aligning reliability decisions with product leadership, and operating observable AWS infrastructure could support Corvale's fleet-connectivity platform.

Best wishes,

Nadia Brennan-Aziz
