Dear Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity engagement. I bring 10 years of infrastructure experience, including six years operating Kubernetes platforms on AWS, and experience taking infrastructure and platform capabilities from design through production.

As technical lead of Tallybrook's platform team, I operate an AWS EKS platform across eight clusters and three regions. I built a Terraform-, Argo CD- and Crossplane-based internal developer platform adopted by all 14 product teams, cutting new-service delivery from approximately two weeks to under one day. I also introduced SLOs that reduced weekly on-call pages by approximately 60%, and led a Karpenter and Spot migration that cut EC2 spend by 38%.

At Brightwater Games, I managed AWS infrastructure in Terraform across approximately 40 modules and used k6 load tests to prepare game backends for launches. I would welcome the opportunity to bring this cloud infrastructure, reliability and technical leadership experience to Corvale's work shaping the cloud foundations for its new trains.

Best wishes, Nadia Brennan-Aziz
