Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I'm a QA automation engineer with seven years of experience, including the last two focused on CI/CD and test infrastructure. I'm now looking to move into platform engineering full time, and I am particularly interested in the opportunity to contribute my automation, observability and infrastructure-as-code experience to a platform connecting operational systems with cloud services.

At Odrava Health Software, I own GitLab CI pipelines and test infrastructure for three product teams. By profiling and improving the pipelines, I reduced their average duration from 38 to 14 minutes and monthly CI runner costs by about 30%. I also built short-lived, per-merge-request environments using Docker Compose and Helm on a shared Kubernetes cluster, so QA and product teams can review features and run end-to-end tests before merge. Across those teams, I documented the CI workflow for onboarding and helped QA and product stakeholders use the environments to review features before merge.

My additional infrastructure experience comes from a personal three-node k3s homelab and a small Hetzner VPS provisioned with Terraform; this is personal infrastructure rather than production company cloud infrastructure. I have also used AWS at a basic personal-learning level, including EC2 and S3 fundamentals. This has given me practical experience with infrastructure as code, monitoring and TLS certificate management, alongside creating Kubernetes namespace-level test deployments. I would bring an analytical, automation-focused approach to CI/CD, testable environments, monitoring and TLS certificate management, while continuing to develop toward broader cloud platform ownership.

Thank you for your consideration. I'd welcome the opportunity to discuss how my experience could contribute to Corvale's fleet connectivity work.

Marta Kowal-Brandt
