Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I'm a QA automation engineer moving into DevOps and platform engineering, with seven years of experience and hands-on ownership of CI/CD, Kubernetes-based test infrastructure, and developer workflows.

At Odrava Health Software, I own GitLab CI pipelines for three product teams and built merge-request environments deployed with Helm to a shared Kubernetes cluster. By parallelising jobs, caching dependencies, and restructuring test stages, I reduced average pipeline time from 38 to 14 minutes and monthly runner costs by about 30%. I also maintain a pytest and Playwright suite of approximately 900 tests, reducing the flaky-test rate from 7% to below 1%. These projects have involved working across QA and product teams to make systems easier to use, review, and maintain.

I'm also building my infrastructure experience through a personal k3s homelab, where I deploy applications with Argo CD and use Prometheus, Grafana, and Loki for monitoring. I've provisioned a small Hetzner VPS setup with Terraform and used AWS EC2 and S3 at a basic level for personal learning. At work, I have namespace-level access to the shared Kubernetes cluster and create Helm-deployed test environments; the platform team operates the cluster. I wrote the internal guide to how our CI works, which is used for team onboarding, and I work with QA and product teams to make pipeline workflows easier to adopt and maintain. I'm preparing for the CKA exam.

Corvale's focus on connecting onboard systems with cloud services, and its emphasis on engineering teams owning systems end to end, make this an exciting opportunity for me to grow into infrastructure engineering. I would welcome the chance to discuss how I could contribute to the Fleet Connectivity team through my experience improving CI reliability, creating repeatable Kubernetes test environments, and making engineering workflows observable and easier to operate.

Kind regards,

Marta Kowal-Brandt
