Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. My work has a strong DevOps and infrastructure focus: I own and operate GitLab CI pipelines for three product teams and build and maintain short-lived Kubernetes environments that let teams validate changes before merge.

At Odrava Health Software, I built merge-request environments deployed with Helm to a shared Kubernetes cluster, with automatic cleanup and e2e tests against each environment. I also improved the pipelines used by three teams, reducing average run time from 38 to 14 minutes and monthly CI runner cost by approximately 30%. These projects have involved making build and test workflows repeatable and useful to developers, and documenting CI for onboarding.

I have also built a personal k3s homelab using Argo CD, Prometheus, Grafana and Loki, and provisioned infrastructure for a small Hetzner VPS with Terraform. My Terraform work and AWS exposure (EC2 and S3 basics) are currently personal learning projects; my production infrastructure work has focused on CI/CD and namespace-level Kubernetes test deployments. I am preparing for the CKA exam, scheduled for January 2027.

Corvale's work on a new train fleet makes this a particularly interesting opportunity to apply my infrastructure and automation experience to systems connecting vehicles and cloud services. I would welcome the opportunity to discuss how my background could contribute to the team's work on reliable, observable infrastructure.

Thank you for your consideration.

Marta Kowal-Brandt
