Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. In my current role at Odrava Health Software, I own GitLab CI pipelines and build test infrastructure used by three product teams. I'm interested in applying that experience to a platform being shaped from the start, where reliability, observability and maintainable deployment workflows matter.

I've improved pipeline speed and reliability by parallelising jobs, caching dependencies and separating end-to-end testing: average pipeline duration fell from 38 to 14 minutes, while monthly CI runner costs decreased by about 30%. I also built short-lived merge-request environments using Helm on a shared Kubernetes cluster, with automatic cleanup. I documented the CI system for onboarding, coordinated the needs of QA and product teams, and made test environments easier to use and maintain.

Alongside my professional CI and Kubernetes work, I have hands-on personal experience with infrastructure provisioning and operation: I provisioned a small Hetzner VPS with Terraform and operate a three-node k3s homelab with Argo CD. My AWS exposure is limited to free-tier learning with EC2 and S3, rather than production AWS operations. I've also configured Traefik and cert-manager for ingress and TLS. This work also includes Linux-based operation and TLS certificate management. My Terraform experience is currently from personal infrastructure rather than production cloud environments; I would bring a strong foundation in automation and test infrastructure while continuing to develop in cloud platform engineering.

Corvale's engineering-led approach and focus on connecting a new train fleet to its cloud platform make this role especially compelling to me. I'd welcome the opportunity to discuss how I could contribute experience in CI/CD infrastructure, Kubernetes-based test environments, observability, Linux-based tooling, and infrastructure automation while developing further in cloud platform engineering.

Thank you for your time.

Marta Kowal-Brandt
