Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor role supporting fleet connectivity. The opportunity to help develop infrastructure for Corvale's new train fleet is a strong match for the direction of my work: building dependable environments and delivery tooling that help software teams deploy, test, and operate services.

At Odrava Health Software, I own GitLab CI pipelines for three product teams and built merge-request environments deployed with Helm to a shared Kubernetes cluster. I shortened average pipeline time from 38 to 14 minutes, and our ephemeral environments let QA and product review changes and run end-to-end tests before merge. I also maintain a suite of approximately 900 end-to-end tests and helped reduce its flaky-test rate from 7% to below 1%. The platform team operates the shared cluster; my production work is at the namespace and test-environment level.

Alongside my professional work, I run a three-node k3s homelab with GitOps deployments, Prometheus, Grafana, Loki, ingress, and TLS automation. I have also provisioned infrastructure for a small Hetzner VPS using Terraform. My cloud exposure is currently personal learning rather than work experience, including AWS EC2 and S3 basics, and I am preparing for the CKA exam. These projects complement my experience with Linux, Docker, Helm, Python, Bash, and PostgreSQL.

I bring a practical focus on reliable delivery, observability, and clear technical documentation. At Odrava, I wrote the internal guide to how CI works for onboarding and mentored two QA interns. I would welcome the opportunity to discuss how this experience could contribute to Corvale's fleet connectivity platform.

Kind regards,
Marta Kowal-Brandt
