Daniel Okafor-Reyes

Backend Engineer | Java, Kotlin, Event-Driven Services

applicant.inbox@example.com | +44 7700 900123

PROFESSIONAL SUMMARY

Backend engineer with professional experience since 2019 building and maintaining Java and Kotlin backend services. Experience designing REST APIs, working with PostgreSQL and Kafka, automated testing, Docker, and Kubernetes on AWS EKS. Improved API reliability and data correctness through partner rate limiting, contract tests, and idempotent event processing. Seeking to bring this comparable-language experience to a Python-focused backend role.

TECHNICAL SKILLS

Backend: Java, Kotlin, Spring Boot, REST APIs, OpenAPI 3
Data and messaging: PostgreSQL, Oracle, Kafka, RabbitMQ, Redis
Cloud and containers: AWS EKS, S3 and SQS (service user); Kubernetes; Docker
Testing and delivery: Testcontainers, Spring Cloud Contract, contract testing; small Jenkins helper scripts
Other languages and tools: Python (scripts for data fixes and Jenkins helpers; no production services); Go (learning project); Terraform (can read configurations; has not authored modules)

PROFESSIONAL EXPERIENCE

Backend Engineer | Tejo Insurance Tech | 2022–Present

- Build Java and Kotlin Spring Boot microservices using Kafka, PostgreSQL and Kubernetes (EKS).
- Designed a versioned OpenAPI 3 REST API for insurance brokers to request quotes; added partner-level rate limiting and Spring Cloud Contract tests. The API supports 12 broker partners and around 400,000 quote requests per month.
- Implemented a transactional outbox and idempotency keys for Kafka consumers, reducing duplicate claim records from around 40 per week to zero over the following quarter.
- Built an internal Kotlin and Spring Boot service that renders policy PDFs from templates; wrote the team's Kotlin coding guidelines. The service uses AWS S3 and SQS.
- Participate in an on-call rota one week per month. Handled a major Kafka lag incident in March 2024; the incident writeup was praised.
- Run the backend guild meeting every two weeks, a responsibility held since 2024.

Software Developer | Viajar Online | 2019–2021

- Worked on the booking and payments parts of a large Java application.
- Raised test coverage of the payments module from 35% to 70% using Testcontainers, enabling safer refactoring.
- Extracted email and SMS notifications from the booking monolith into a separate Spring Boot service using RabbitMQ and Thymeleaf.

PROJECTS

OpenAPI Spec Diff CLI | Go | Side project

- Building a roughly 600-line CLI to diff OpenAPI specifications; available on GitHub. This is a learning project and is not production software.

CERTIFICATION

Oracle Certified Professional Java SE 11 Developer | 2020

LANGUAGE

English: Worked in an English-speaking environment at Tejo Insurance Tech.
