Dear Corvale Mobility hiring team,

Marta Kowal-Brandt

marta.kowalbrandt@example.com | +48 555 303 303 | github.com/mkb-dev | gitlab.com/mkb-example

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. At Odrava Health, I own CI/CD pipelines in GitLab CI for three product teams and have built short-lived test environments using Docker Compose and Helm on a shared Kubernetes cluster. By profiling and improving the pipelines, I reduced their average runtime from 38 to 14 minutes and monthly CI runner costs by about 30%. The environments let QA and product reviewers assess features before merge, with automated end-to-end tests and cleanup. This work has given me a practical foundation in building repeatable delivery infrastructure and making systems more observable and reliable.

My work has focused on making delivery more reliable and easier for teams to operate. I maintain a pytest and Playwright suite of approximately 900 tests, helped bring its flaky rate from 7% to below 2%, and built Grafana dashboards to make recurring failures visible. I documented our CI platform for onboarding and mentored two QA interns, while the ephemeral environments enabled QA and product reviewers to evaluate changes before merge. By documenting CI practices for onboarding, mentoring two QA interns, and enabling QA and product reviewers to assess changes before merge, I have developed strong analytical thinking, technical communication, and experience bringing stakeholders along with delivery improvements.

Alongside my professional work, I built a three-node k3s homelab with GitOps deployments, Prometheus, Grafana and Loki, configured Traefik ingress and cert-manager for TLS, and used Terraform to provision a small Hetzner VPS. I have also used AWS EC2 and S3 at a basic level through personal learning, while my strongest infrastructure-as-code experience is with Terraform in personal projects. This has strengthened my practical foundation in Linux-based infrastructure, Kubernetes operations, observability and infrastructure as code. My strongest experience is in CI/CD, test infrastructure and observability, and I'm developing further depth in cloud and platform engineering.

Corvale's engineering-led approach and the opportunity to help build reliable, observable infrastructure for a new train fleet are especially compelling to me. I would welcome the chance to discuss how my experience building reliable delivery and test infrastructure could contribute to the Fleet Connectivity team.

Thank you for your consideration.

Marta Kowal-Brandt
