Dear Corvale Mobility hiring team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I'm a QA automation engineer with seven years of experience, including recent work owning CI pipelines and building test infrastructure for three product teams. I'm applying this infrastructure and delivery experience to a DevOps and platform engineering role, and the opportunity to help shape infrastructure for Corvale's train-to-cloud platform is a compelling fit for that direction.

At Odrava Health, I own GitLab CI pipelines used by around 25 developers. I reduced average pipeline time from 38 to 14 minutes and monthly runner costs by about 30% by parallelising jobs, caching dependencies and restructuring test stages. I also built merge-request environments using Docker Compose and, later, Helm on a shared Kubernetes cluster. These short-lived environments include the application, PostgreSQL and seeded data, and support reviews and end-to-end testing before changes are merged. I also built a Python/PostgreSQL test-results pipeline and Grafana dashboards that helped teams reduce flaky tests from 7% to below 1%. This work has given me practical experience improving how teams build, test and deliver services, with attention to reliability and maintainability.

Alongside my professional work, I built a three-node k3s homelab with GitOps deployments, Prometheus, Grafana and Loki monitoring/logging, Traefik ingress, and cert-manager for TLS. I have also provisioned infrastructure for a small Hetzner VPS with Terraform and have hands-on learning experience with AWS EC2 and S3. My professional Kubernetes work is focused on Helm charts and test environments on a shared cluster; I'm currently preparing for the CKA exam. I would bring a hands-on, analytical approach to Corvale's infrastructure work; I wrote the internal CI guide used for team onboarding and mentored two QA interns, helping teams understand and adopt technical processes.

Corvale's focus on end-to-end ownership and engineering-led problem-solving particularly appeals to me. I'd welcome the opportunity to discuss how my experience in CI/CD, ephemeral environments, Kubernetes/Helm test infrastructure, observability, and infrastructure automation could contribute to the Fleet Connectivity team.

Kind regards,

Marta Kowal-Brandt
