Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor role supporting Fleet Connectivity. My experience building CI pipelines and short-lived Kubernetes test environments has given me a practical foundation in automating deployments and making services easier for development teams to test and operate.

At Odrava Health Software, I own GitLab CI pipelines for three product teams and built merge-request environments deployed with Helm to a shared Kubernetes cluster. These environments combine the application, PostgreSQL and seeded data, run end-to-end tests, and are cleaned up automatically. I also improved pipeline execution from 38 to 14 minutes and helped reduce flaky test rates from 7% to below 2%. I document how the CI system works for onboarding and have mentored two QA interns, experience that supports clear collaboration across technical teams.

Alongside this work, I built a personal three-node k3s homelab deployed through Argo CD, with Prometheus, Grafana, Loki and cert-manager for TLS. I have also used Terraform to provision infrastructure for a small Hetzner VPS. I would bring this hands-on infrastructure practice and my experience improving reliable delivery workflows to Corvale's work connecting train systems with cloud services.

I would welcome the opportunity to discuss how my CI/CD, Kubernetes and infrastructure automation experience could contribute to the Fleet Connectivity team. Thank you for your consideration.

Sincerely, Marta Kowal-Brandt
