Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. In my current role at Odrava Health Software, I own GitLab CI pipelines and build short-lived test environments for three product teams. I'm interested in bringing that hands-on infrastructure experience to a team shaping the systems that connect vehicles with cloud services.

At Odrava Health Software, I own GitLab CI pipelines for three product teams serving approximately 25 developers and implemented merge-request environments with Helm on a shared Kubernetes cluster. The environments include the application, PostgreSQL and seeded data, with automatic cleanup after merge or 48 hours of inactivity. I also improved pipeline performance across three teams, reducing average run time from 38 to 14 minutes and monthly CI runner costs by about 30%. I work across QA, product and development teams, documented the CI system for onboarding, and mentored two QA interns.

My personal infrastructure work includes a three-node k3s homelab using Argo CD, Prometheus, Grafana and Loki, provisioning a small Hetzner VPS with Terraform, and AWS free-tier learning with EC2 and S3 basics. The homelab also uses Linux-based k3s nodes, Traefik ingress and cert-manager for TLS. I'm studying for the CKA exam. I would bring a practical approach to building and improving infrastructure, supporting observable services, and making technical workflows clear and maintainable.

Corvale's work on a new generation of rail services and its emphasis on engineering ownership and collaboration make this an appealing opportunity. I'd welcome the chance to discuss how my experience with CI/CD, Kubernetes-based environments, infrastructure tooling and observability could support Corvale's work on reliable, maintainable cloud services.

Thank you for your consideration.

Marta Kowal-Brandt
