Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I bring seven years of QA automation experience, with the last two focused primarily on CI/CD pipelines, test environments and build tooling. I am now looking to move into DevOps and platform engineering full time, and the opportunity to help shape infrastructure for Corvale's train-to-cloud platform is a strong match for the direction of my work.

At Odrava Health Software, I own GitLab CI pipelines and test infrastructure used by three product teams. I reduced average pipeline time from 38 to 14 minutes by parallelising jobs, adding dependency caching and separating end-to-end tests into their own stage; the work also reduced monthly CI runner costs by about 30%. I built merge-request environments using Helm on a shared Kubernetes cluster, with automatic cleanup and end-to-end tests running against them. This was hands-on infrastructure engineering within a shared Kubernetes environment: I wrote the Helm deployment configuration, automated lifecycle management, and integrated testing and seeded data. This experience has taught me to make infrastructure practical for the teams that build and operate services, while improving reliability and feedback.

My infrastructure-as-code experience includes Terraform in personal Linux-based projects: I built a three-node k3s homelab deployed through Argo CD. I also configured Prometheus, Grafana and Loki for observability, Traefik for ingress, and cert-manager for TLS certificate management. My Terraform experience is from personal infrastructure projects, including provisioning a small Hetzner VPS; my AWS exposure is also personal learning focused on EC2 and S3 basics, rather than production cloud operations. Alongside the technical work, I wrote an internal guide to our CI workflows used for onboarding and profiled pipelines across three teams.

Corvale's engineering-led approach and emphasis on teams owning systems end to end appeal to me. I would welcome the opportunity to discuss how my experience building observable CI and test infrastructure, managing TLS-enabled ingress in personal environments, and improving developer feedback loops could contribute to Corvale's fleet connectivity platform. Thank you for your consideration.

Kind regards,
Marta Kowal-Brandt
