Nadia Brennan-Aziz

Dear Corvale Mobility hiring team,

I'm applying for the Cloud Infrastructure / DevOps Contractor role. I bring 10 years of infrastructure experience, including six years operating Kubernetes platforms on AWS.

At Tallybrook, I'm the technical lead for a five-person platform team operating an EKS platform across eight clusters, approximately 350 services and three regions. I designed and built an internal developer platform using Terraform, Argo CD and Crossplane, enabling all 14 product teams to provision infrastructure through pull requests and reducing the time to take a new service to production from around two weeks to under one day. I also led an SLO programme with product leadership that reduced on-call pages by approximately 60%. This work has strengthened my approach to system design: make infrastructure approachable and keep services observable.

Earlier, at Brightwater Games, I managed AWS infrastructure using around 40 Terraform modules and Atlantis, and replaced a noisy Nagios setup with a Prometheus, Grafana, Alertmanager and Loki observability stack. I also led launch capacity planning, using k6 tests simulating 300,000 concurrent players to identify and resolve a connection-pool limit before launch. That experience is relevant to shaping reliable cloud infrastructure for vehicle-connected services, where clear interfaces, careful preparation and operational visibility matter.

Corvale's plan to connect its new train fleet with cloud services calls for thoughtful architecture and close collaboration across engineering teams. I would welcome the opportunity to bring my AWS, Terraform and platform reliability experience to that work and discuss how I could contribute.

Best wishes,
Nadia Brennan-Aziz
