NADIA BRENNAN-AZIZ

Senior Site Reliability / Platform Engineer

Manchester, UK | nadia.brennanaziz@example.com | +44 7700 900909 | github.com/nba-sre-example

PROFESSIONAL SUMMARY

Senior platform and reliability engineer with six years of experience running Kubernetes platforms on AWS. Hands-on expertise in Terraform and AWS cloud environments. Builds reliable, observable platforms and self-service infrastructure that help product teams deploy and operate services effectively.

CORE SKILLS

Cloud infrastructure: AWS (EKS, EC2, VPC, IAM, RDS, S3, SQS, Route 53, CloudFront), cloud environment design, infrastructure engineering and cloud infrastructure operation

Infrastructure as code: Terraform, Atlantis, Crossplane

Platform and systems: Linux systems, Kubernetes, Helm, Kustomize, Argo CD, Karpenter

Reliability and observability: Prometheus, Grafana, Loki, Alertmanager, OpenTelemetry, SLOs and error budgets, incident management

Automation and testing: Go, Python, Bash, GitHub Actions, k6, Puppet

PROFESSIONAL EXPERIENCE

Senior Platform Engineer | Tallybrook Ltd Manchester / remote | Apr 2022 – Present

- Technical lead for a five-person platform team, operating an AWS EKS platform spanning eight clusters, approximately 350 services and three regions.
- Designed and built an internal developer platform with Go and Python service templates, Argo CD GitOps, and Crossplane-based self-service provisioning for RDS, SQS and S3 through pull requests.
- Enabled adoption of the developer platform across all 14 product teams, reducing the time to take a new service to production from approximately two weeks to under one day.
- Led the SLO programme for the 20 most critical services, using Prometheus recording rules and Sloth to introduce burn-rate alerts and an error-budget policy agreed with product leadership; reduced on-call pages by approximately 60%.
- Replaced cluster-autoscaler managed node groups with Karpenter and spot capacity for stateless workloads, including interruption handling; reduced EC2 spend by 38% (approximately GBP 410,000 annually).
- Participated in the incident commander rotation and established the incident and post-mortem process.
- Mentored three engineers transitioning into SRE from backend engineering.

Site Reliability Engineer | Brightwater Games Leeds | Jan 2019 – Mar 2022

- Operated AWS game backend infrastructure using EC2, ECS and later EKS, supporting titles with up to 1.2 million daily active players.
- Managed AWS infrastructure as code with approximately 40 Terraform modules and used Atlantis for pull-request-based plan and apply workflows.
- Replaced a noisy Nagios setup with a Prometheus, Grafana, Alertmanager and Loki observability stack.
- Ran k6 load tests and led launch capacity planning, including tests simulating 300,000 concurrent players; identified and resolved a connection-pool limit before launch.

SELECTED PROJECT

Kubernetes cleanup controller | Open source side project | 2024

- Built a small Go controller using controller-runtime to delete expired preview namespaces; the project has approximately 120 GitHub stars.

EDUCATION

BSc Computer Science | University of the North Moors | 2016

CERTIFICATIONS

AWS Certified Solutions Architect – Professional | 2023

Certified Kubernetes Administrator (CKA) | 2021, renewed 2024

COMMUNITY

Speaker, UK DevOps meetup | 2024

“SLOs that product managers care about”

LANGUAGES

English (native) | Urdu (conversational)
