NADIA BRENNAN-AZIZ

Cloud Infrastructure / Platform Engineer

nadia.brennanaziz@example.com | +44 7700 900909 | github.com/nba-sre-example

SUMMARY

Senior platform and infrastructure engineer with 10 years of experience designing, building and operating cloud environments, including six years running Kubernetes platforms on AWS. Strong hands-on Terraform experience and a track record of taking cloud infrastructure, platform and system-design improvements from proposal through production, while bringing product and engineering stakeholders along.

CORE SKILLS

Cloud infrastructure and networking: AWS (EKS, EC2, VPC, IAM, RDS, S3, SQS, Route 53, CloudFront), cloud environment design and operation, AWS networking
Infrastructure as code and platform automation: Terraform, Atlantis, Crossplane, GitHub Actions
Systems and platforms: Kubernetes, Helm, Kustomize, Argo CD, Karpenter, Linux
Reliability and observability: Prometheus, Grafana, Loki, Alertmanager, OpenTelemetry, SLOs and error budgets, incident management
Automation and testing: Go, Python, Bash, k6, GitHub Actions, Puppet

EXPERIENCE

Senior Platform Engineer | Tallybrook Ltd | Manchester / remote *Apr 2022 – Present*

- Technical lead for a five-person platform team operating an AWS EKS platform across eight clusters and three regions, supporting approximately 350 services.
- Designed and built an internal developer platform with Go and Python service templates, Argo CD GitOps and Crossplane self-service provisioning for RDS, SQS and S3; adopted by all 14 product teams and reduced time from new service to production from approximately two weeks to under one day.
- Led the introduction of SLOs and burn-rate alerts for the 20 most critical services using Prometheus recording rules and Sloth; agreed the error-budget policy with product leadership and reduced on-call pages per week by approximately 60%.
- Migrated node provisioning to Karpenter and introduced Spot instances for stateless workloads, reducing EC2 spend by 38% (approximately £410,000 per year).
- Serve in the incident commander rotation and established the incident and post-mortem process.

Site Reliability Engineer | Brightwater Games | Leeds *Jan 2019 – Mar 2022*

- Operated AWS game-backend infrastructure (EC2, ECS and later EKS) for titles with up to 1.2 million daily active players.
- Managed AWS infrastructure as code using Terraform (approximately 40 modules) and Atlantis for pull-request plan and apply workflows.
- Replaced a noisy Nagios setup with a Prometheus, Grafana, Alertmanager and Loki observability stack.
- Led launch capacity planning and used k6 load tests simulating 300,000 concurrent players to identify and resolve a connection-pool limit before launch.

SELECTED TECHNICAL PROJECT

Kubernetes cleanup controller | Open-source side project *2024*

- Built a small Go controller using controller-runtime to delete expired preview namespaces; the project has approximately 120 GitHub stars.

LEADERSHIP AND COMMUNITY

- Mentored three engineers transitioning from backend development into SRE.
- Speaker at a UK DevOps meetup in 2024: “SLOs that product managers care about”.

EDUCATION

BSc Computer Science | University of the North Moors *2016*

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) | 2021, renewed 2024
AWS Certified Solutions Architect – Professional | 2023

LANGUAGES

English (native) | Urdu (conversational)
