Dear Corvale Mobility team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. Over the past seven years in QA engineering, I've increasingly focused on the infrastructure that helps product teams build, test and deliver reliably. At Odrava Health, I own and improve GitLab CI/CD pipelines and merge-request test environments for three product teams, helping make changes easier to validate and safer to deliver.

I've reduced average pipeline time from 38 to 14 minutes and monthly CI runner costs by about 30%, and helped bring the flaky-test rate in a suite of approximately 900 tests from 7% to below 1%. I also designed short-lived environments deployed with Helm to a shared Kubernetes cluster, with seeded PostgreSQL data and automatic cleanup. I own these improvements for three product teams of approximately 25 developers and enable QA and product colleagues to review changes and run end-to-end tests before merge. This work involves making infrastructure usable for others and documenting internal practices for onboarding.

Alongside my professional work, I built a three-node k3s homelab where applications are deployed from Git using Argo CD. I set up Prometheus, Grafana and Loki, configured Traefik and cert-manager for TLS certificate management, and provisioned a small Hetzner VPS with Terraform. I have also used the AWS free tier for basic EC2 and S3 learning exercises, although my professional infrastructure experience has been primarily with GitLab CI, Kubernetes, and personal Hetzner infrastructure. I'm currently preparing for the CKA exam. These projects have strengthened my practical understanding of infrastructure automation, observability, Linux-based environments, and TLS certificate management, while giving me a foundation to grow further in cloud infrastructure engineering.

Corvale's work connecting vehicle systems with cloud services is a compelling setting for this next step. I'd bring hands-on experience improving delivery workflows, making shared infrastructure usable for multiple teams, documenting technical practices for onboarding, and using measurable analysis to improve reliability and cost. Thank you for considering my application. I'd welcome the opportunity to discuss how my experience could contribute to the Fleet Connectivity team.

Kind regards,
Marta Kowal-Brandt
