LENA VARGA-HOLM

SENIOR DATA ENGINEER | DATA PLATFORM

lena.vargaholm@example.com | +385 55 555 0101 | github.com/lvh-data-example

PROFESSIONAL PROFILE

Senior data engineer with 9 years of experience designing, building and operating production data platforms and cloud data warehouses across logistics, e-commerce and payments. Hands-on expertise in Python, SQL, Airflow, dbt, Kafka, Snowflake and AWS, with experience processing large-scale batch and streaming data. Strong background in dimensional data modelling, data quality, data contracts and reusable platform engineering. Focused on reliable pipelines, clear data contracts and trusted analytical data.

TECHNICAL SKILLS

Programming: Python, SQL, Bash
Data platform and engineering: Airflow, dbt, Spark (PySpark), Kafka, Kafka Connect, Debezium, Snowflake, Redshift, PostgreSQL, Great Expectations
Cloud and infrastructure: AWS (S3, EMR, Glue, Lambda, IAM, MSK), Docker, Terraform (basic), GitHub Actions
Data modelling and quality: Dimensional modelling, star schemas, data contracts, JSON Schema, data quality testing
BI: Power BI, Looker (basic)

PROFESSIONAL EXPERIENCE

Senior Data Engineer | Lukovac Freight Hub d.o.o. (logistics marketplace) | Rijeka
03/2022–Present

- Own ingestion and orchestration for the production data platform, maintaining approximately 140 Airflow DAGs loading from PostgreSQL, MySQL, Salesforce and third-party APIs into Snowflake.
- Migrated warehouse transformation logic from stored procedures to dbt, delivering more than 420 models with tests and reducing nightly build time from 5 hours 10 minutes to 1 hour 35 minutes.
- Introduced incremental models and state:modified CI in GitHub Actions, with lineage visible to analysts.
- Defined data contracts between product and data teams using JSON Schema and CI checks, reducing broken-pipeline incidents from approximately 9 to 2 per month.
- Designed and built a Kafka-based shipment tracking pipeline using partner webhooks, Kafka Connect and Snowpipe Streaming, processing around 30 million events per day with end-to-end latency under 2 minutes at p95.
- Added a dead-letter topic and replay tooling to support reprocessing failed events without data loss.
- Replaced hourly full-table extracts of the orders database with Debezium change data capture into Kafka, reducing replica CPU during loads from approximately 70% to 25%.
- Mentor two mid-level data engineers and run weekly data platform office hours.

Data Engineer | Kovalent Pay (payments startup) | Zagreb
09/2019–02/2022

- Built PySpark batch jobs on AWS EMR to reconcile bank settlement files against internal ledgers, processing approximately 1.2 TB of raw S3 files daily.
- Reduced finance team's manual reconciliation work from around 3 days to 4 hours per month-end.
- Designed a Redshift warehouse using a star schema with more than 30 fact and dimension tables for finance and risk teams.

- Implemented Great Expectations data quality checks on critical finance tables.
- Developed an internal Python library for S3 and Glue Data Catalog access, adopted by four teams.

Junior Data Engineer / BI Developer | Adria Retail Group | Split
06/2017–08/2019

- Maintained SSIS packages and T-SQL ETL pipelines for an on-premises SQL Server warehouse.
- Built Power BI reports supporting store operations across more than 40 stores.
- Migrated 60 nightly SSIS jobs to Python scripts scheduled with cron.

OPEN-SOURCE CONTRIBUTION

Airflow provider package | 2023

- Fixed a pagination bug and added tests to a community Airflow provider for a SaaS CRM API; two pull requests were merged.
- Technologies: Python, Airflow, pytest.

EDUCATION

MSc Computer Science, Data Science track | Northgate Technical University | 2017
Thesis: Incremental materialized views for analytical queries
