Dear Tessel Cargo Software hiring team,

I am applying for the Backend Engineer (Python) role on the Routing & Tracking team. I bring seven years of professional experience building and operating backend services in Java and Spring Boot, a comparable language background for a role focused mainly on Python, and I am happy to work mainly in Python. My Python experience to date has been scripting for data fixes and Jenkins helpers; I have not yet shipped a Python service.

In my current role at Tejo Insurance Tech, I develop and maintain services for policy quoting and claims intake. I designed a versioned REST API used by 12 broker partners, and improved its p99 latency from 1.8 seconds to 450 milliseconds by adding Redis caching and resolving JPA query issues. I have worked with PostgreSQL and improved relational-database performance through JPA query tuning, and I deploy Dockerised services to Kubernetes on AWS EKS through Jenkins CI/CD pipelines. These experiences align closely with the role's focus on dependable APIs, event processing, and production reliability.

I take production ownership seriously: I participate in a monthly on-call rota and helped resolve a Kafka lag incident, followed by a post-incident write-up. Earlier, I wrote automated integration tests with Testcontainers, increasing payments-module test coverage from 35% to 70% and supporting safer refactoring. I value clear technical communication and facilitate a fortnightly backend guild, experience I would bring to design discussions and knowledge-sharing on your team.

Tessel's focus on reliable shipment tracking and small teams that own what they build and run makes this opportunity particularly appealing. I have worked fully in English at Tejo Insurance Tech and regularly explain technical decisions through backend-guild discussions and written incident documentation. I would welcome the chance to discuss how my backend experience could contribute to the Routing & Tracking platform.

Thank you for considering my application.

Best regards,
Daniel Okafor-Reyes
