MARTA KOWAL-BRANDT

QA Automation Engineer | CI/CD and Infrastructure

marta.kowalbrandt@example.com | +48 555 303 303 | gitlab.com/mkb-example

PROFESSIONAL SUMMARY

QA automation engineer with experience owning CI/CD pipelines and test infrastructure for three product teams. Built ephemeral environments using GitLab CI, Docker, Helm and Kubernetes, and improved pipeline performance and test reliability. Personal infrastructure projects include Terraform, k3s, GitOps, monitoring and TLS certificate management. Seeking a DevOps or platform engineering role.

TECHNICAL SKILLS

CI/CD and containers: GitLab CI, Jenkins, Docker, Docker Compose, Helm, Kubernetes
Infrastructure and cloud: Terraform, k3s, Argo CD, Ansible (basic), Hetzner VPS; AWS EC2 and S3 (learning basics)
Monitoring: Prometheus, Grafana, Loki
Networking and certificates: Traefik ingress, cert-manager for TLS
Languages and systems: Python, Bash, SQL, Java (test code), Linux, Git, PostgreSQL
Testing: pytest, pytest-xdist, Playwright, Selenium, Postman

PROFESSIONAL EXPERIENCE

QA Automation Engineer, Test Infrastructure | Odrava Health Software | 2021–Present

- Own GitLab CI pipelines for three product teams of approximately 25 developers, covering builds, unit, integration and end-to-end tests, and artifact publishing.
- Reduced average pipeline time from 38 to 14 minutes by parallelising test jobs, caching dependencies and separating end-to-end tests; monthly CI runner costs fell by approximately 30%.
- Built merge-request environments for application review and end-to-end testing, initially with Docker Compose and later with Helm on a shared Kubernetes cluster. Environments include PostgreSQL and seeded data and are destroyed after merge or 48 hours of inactivity.
- Write Helm charts and work with namespace-level access; the platform team operates the shared Kubernetes cluster.
- Maintain a pytest and Playwright end-to-end suite of approximately 900 tests. Built Grafana dashboards using CI results stored in PostgreSQL, helping teams reduce the flaky-test rate from 7% to below 1%.
- Developed Bash and Python tooling to seed PostgreSQL test data.
- Wrote internal CI documentation used in onboarding and mentored two QA interns in 2023.

QA Engineer | Brightmill Software House | 2019–2021

- Tested web and mobile applications manually and with automation across client projects.
- Introduced the first automated regression suite for the largest client project using Selenium and Java; configured Jenkins for nightly runs. Previously, a full regression required two people for three days.
- Rewrote a small part of the API tests in Python as practice.

Customer Support Specialist, Second Line | Brightmill Software House | 2018–2019

- Investigated customer issues using logs and databases and reproduced bugs for developers.

PERSONAL INFRASTRUCTURE PROJECT

Homelab k3s Cluster with GitOps | 2024–2025

- Built a three-node Raspberry Pi 5 k3s cluster, deploying applications from a Git repository with Argo CD.
- Used Prometheus, Grafana and Loki for monitoring, Traefik for ingress and cert-manager for TLS.
- Provisioned infrastructure for a personal Hetzner VPS with Terraform; also used basic Ansible.

EDUCATION AND CERTIFICATION

BEng, Computer Engineering | Silesian Lowlands University of Technology | 2018
ISTQB Foundation Level | 2019
Certified Kubernetes Administrator (CKA): studying; exam booked for January 2027

LANGUAGES

Polish: Native | English: C1 | German: A2
