Dear Hiring Manager,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role at Corvale Mobility. I am a QA automation engineer with seven years of experience, including two years focused largely on CI/CD pipelines, test environments and build tooling. I am seeking to move into DevOps or platform engineering full time, building on my experience supporting product teams with infrastructure and automation.

At Odrava Health Software, I own GitLab CI pipelines for three product teams, covering builds, testing and artifact publishing. I reduced average pipeline time from 38 to 14 minutes by parallelising test jobs, caching dependencies and moving end-to-end tests to on-demand environments. I also built merge-request test environments using Docker Compose and later Helm charts on a shared Kubernetes cluster. This work has given me practical experience making development and testing workflows more efficient for three product teams and approximately 25 developers.

Corvale's fleet connectivity project brings together infrastructure and backend services to support a new generation of trains. I would bring experience with Linux, Python and Bash, as well as a testing background grounded in reliability: I maintain an approximately 900-test end-to-end suite and helped reduce its flaky test rate from 7% to under 1%. My ownership of pipelines across three teams also aligns with Corvale's emphasis on collaboration and end-to-end ownership.

Earlier in my career, I also investigated customer issues using logs and databases and reproduced bugs for developers.

I would welcome the opportunity to discuss how my test infrastructure and CI/CD experience could contribute to the fleet connectivity team. Thank you for your consideration.

Kind regards,
Marta Kowal-Brandt
