Dear Verdane Care Hiring Team,

I am excited to apply for the Full-Stack Engineer role on the Patient Experience team. I recently completed a BSc (Hons) in Computing – Software Development at Liffey Institute of Technology with First Class Honours. My accessible React internship and project-based work with TypeScript, Node.js, Express and PostgreSQL have prepared me to contribute to patient-facing features and supporting APIs.

During my Software Development internship at Harbourline Media, I worked on its React news site, fixing accessibility issues across 20+ components and building a reusable, keyboard- and screen-reader-friendly image gallery documented in Storybook. I wrote unit tests with Jest and React Testing Library and use Git and GitHub in my development work. For Tidewatch, my final-year project, I developed an accessible React and TypeScript app and a Node.js/Express API backed by PostgreSQL. I tested it with NVDA and VoiceOver and achieved a Lighthouse accessibility score of 100. More recently, I built and deployed a booking website for a local yoga studio using Next.js, React and Tailwind CSS.

Verdane Care's focus on patients, privacy by default and accessible design particularly resonates with me. Testing Tidewatch with NVDA and VoiceOver reinforced the importance of making essential information usable for people with different access needs. My experience improving keyboard navigation, colour contrast, ARIA labels and screen-reader usability has strengthened that commitment. I would be delighted to bring my frontend and project-based full-stack experience to Verdane Care's patient-facing products while continuing to grow as a full-stack engineer.

Thank you for considering my application. I would welcome the opportunity to discuss how my accessible React and project-based full-stack experience could support Verdane Care's patient experience team.

Yours sincerely,
Aiyana Brooks-Tan
