Dear Verdane Care hiring team,

I am applying for the Full-Stack Engineer (TypeScript / React) – Patient Experience role. I am a third-year Computing student at Liffey Institute of Technology, with hands-on experience building React and TypeScript applications, including a full-stack project with a Node.js/Express API and PostgreSQL.

During my software development internship at Harbourline Media, I implemented React components and accessibility fixes for a news website. I also built a keyboard- and screen-reader-friendly image gallery for article pages, documented it in Storybook, and used Jest and React Testing Library for unit and component testing. In my final-year project, Tidewatch, I built an accessible web app end to end and tested it with NVDA and VoiceOver; it achieved a Lighthouse accessibility score of 100.

I am interested in bringing this experience to patient-facing features at Verdane Care. Your focus on accessible experiences and the principles “Patients first” and “Simple beats clever” resonate with the care I take to make web applications easier to use. Alongside Tidewatch, I built a Next.js booking site for a yoga studio, including a class timetable and booking requests, and a React frontend for a collaborative study-matching app. I have also supported around 30 first-year students in web development lab sessions.

Thank you for considering my application. I would welcome the opportunity to discuss how my frontend, accessibility and project-based full-stack experience could contribute to the Patient Experience team.

Yours sincerely,
Aiyana Brooks-Tan
