Dear Verdane Care Hiring Team,

I am writing to apply for the Full-Stack Engineer – Patient Experience role. I am an early-career web developer with frontend project experience and a strong interest in building useful, user-focused web experiences. During a 24-hour student hackathon, I worked in a three-person team to build the frontend for a transit delay notifier; our project placed second.

In Spring 2025, I supported approximately 30 first-year students during a semester of web development labs. That experience strengthened my ability to collaborate and explain technical concepts clearly. I have also completed introductory online learning in GraphQL, which I have not yet used in a project, and I am interested in continuing to develop across frontend and full-stack work.

Verdane Care's focus on patient experience, accessibility and privacy resonates with the kind of thoughtful software I would like to contribute to. I would welcome the opportunity to bring my frontend project experience and collaborative approach to your team while developing further as an engineer.

Thank you for considering my application. I would be glad to discuss how my experience and interests could contribute to Verdane Care.

Kind regards,
Aiyana
