Dear Hiring Manager,

I am pleased to apply for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role at Corvale Mobility. My experience operating Azure infrastructure, building Terraform modules and automating deployments would allow me to contribute to the cloud platform connecting your new trains with backend services.

At Havenstad Logistics, I work in a three-person team operating an Azure estate of approximately 400 virtual machines and 12 AKS clusters. I developed Terraform modules for landing zone networking, including hub-spoke VNets, Azure Firewall and private endpoints, and moved release pipelines for 15 internal applications to Azure DevOps YAML pipelines. This work brings together infrastructure design, networking and deployment automation relevant to building and operating Corvale's platform.

Previously, I administered approximately 250 Windows and Linux servers supporting municipal services and led the lift-and-shift migration of 60 servers from VMware to Azure IaaS. As a freelance IT administrator, I supported Microsoft 365 and Azure AD environments for nine small businesses and set up backups, MFA and conditional access. I would bring this combination of operational experience, practical security awareness and technical leadership to Corvale's engineering-led team.

I would welcome the opportunity to talk with you about how my infrastructure and automation experience could support the fleet connectivity project. Thank you for your time and consideration.

Yours sincerely,

Samuel Achterberg-Osei
