Dear Verdane Care team,

I'm applying for the Full-Stack Engineer role in your Patient Experience squad. I have more than 12 years of professional web development experience, with particular strength in frontend development. Verdane's focus on accessible, straightforward patient experiences is a strong match for the customer-facing work I do today.

At Älvgrind Fintech, I build customer-facing onboarding features with React and TypeScript, Node.js/NestJS backend services, and PostgreSQL in a six-person cross-functional team. I built a BankID verification flow that was A/B tested before rollout; onboarding conversion increased from 61% to 74%. I also built a secure document-upload flow using S3 presigned URLs, ClamAV malware scanning in AWS Lambda, and SQS-based status updates, remediated WCAG 2.1 AA audit findings and helped improve mobile LCP from 4.1 to 1.9 seconds.

I work with designers in Figma and use Jest for automated unit testing, Playwright for end-to-end testing, and GitHub Actions in a Git-based delivery workflow. I've also used Next.js for server-rendered marketing pages and helped migrate our backend from Express to NestJS. Earlier, I led a two-developer React Native ferry ticket app project that reached around 50,000 downloads.

I'd welcome the opportunity to bring this experience in accessible, performant and security-conscious customer-facing features to Verdane's patient experience products. Thank you for considering my application.

Best regards,
Oskar Haddad-Lindqvist
