NADIA

Senior Platform Engineer | Platform Engineering

PROFESSIONAL PROFILE

Senior Platform Engineer and technical lead for a platform team. Experienced in mentoring backend engineers transitioning into SRE and in technical leadership without line management responsibilities.

PROFESSIONAL EXPERIENCE

Senior Platform Engineer | Platform Team Tech Lead

- Serve as technical lead for a platform team, in a technical leadership role without line management responsibilities.
- Mentored three engineers moving from backend development into SRE.
- Used the Backstage catalog; plugins were built by another team.

SPEAKING

Speaker, UK DevOps Meetup, 2024 — Presented “SLOs that product managers care about.”

Dear Hiring Manager,

I am writing to apply for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role at Corvale Mobility. The opportunity to help shape the architecture connecting a new train fleet with cloud services, and carry that work towards production, is an exciting platform engineering challenge.

As a Senior Platform Engineer and technical lead for a platform team, I bring experience leading technical work without line management responsibilities and mentoring three engineers as they moved from backend development into SRE. I have also spoken at the UK DevOps Meetup on “SLOs that product managers care about,” reflecting my interest in making reliability meaningful to product stakeholders. These experiences align with the role’s emphasis on technical leadership, clear communication and supporting backend developers to build services that are observable and reliable.

Corvale’s engineering-led approach and emphasis on teams owning their systems are particularly relevant to platform work. I would welcome the opportunity to discuss how my platform leadership and SRE mentoring experience could contribute to the Fleet Connectivity team as it develops and operates this new infrastructure.

Thank you for your consideration.

Yours sincerely,

Nadia
