Dear Verdane Care Hiring Team,

I am applying for the Full-Stack Engineer (TypeScript / React) – Patient Experience role. I am an early-career developer with hands-on experience building React interfaces, improving accessibility, and writing automated unit tests. Verdane Care's focus on patient-first, straightforward healthcare experiences strongly appeals to me, particularly its commitment to accessibility and privacy by default.

During my software development internship at Harbourline Media, I worked on the company's React news site and resolved accessibility issues across more than 20 components, including keyboard navigation, colour contrast, and ARIA labels. I also built a reusable image gallery component with Storybook stories and wrote unit tests using Jest and React Testing Library. These experiences have given me a practical foundation in accessible interface development, reusable components, Storybook, and automated unit testing.

My academic and project experience complements this work: I earned a First Class Honours degree in Computing – Software Development, and built Tidewatch, an accessible tide and weather app, using React, TypeScript, and Node.js. I have also built a booking website for a local yoga studio using Next.js and Tailwind CSS, giving me additional experience with a wellness-related user journey. My academic project used React, TypeScript, and Node.js, and my technical skills also include Express, PostgreSQL, Next.js, Git and GitHub, and WCAG 2.1 accessibility. I would bring a thoughtful, user-focused approach to building patient-facing features, with a particular interest in Verdane Care's privacy-by-default approach.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience and interest in accessible, straightforward web experiences could contribute to Verdane Care's Patient Experience team. As a native English speaker, I would be comfortable collaborating.

Kind regards,

Aiyana Brooks-Tan
