Dear Verdane Care team,

I'm applying for the Full-Stack Engineer role on the Patient Experience squad. I'm a full-stack developer with 12 years of professional experience, strongest in React and TypeScript, and with hands-on experience building Node.js services and working with PostgreSQL. Verdane Care's focus on patient-facing tools, accessible design and privacy by default makes this role especially compelling.

In my current role at Älvgrind Fintech, I build onboarding features using React, TypeScript, NestJS and PostgreSQL. I built a BankID identity-verification flow that was A/B tested before rollout; onboarding conversion increased from 61% to 74%. I also implemented a secure ID-document upload flow using S3 presigned URLs, virus scanning in Lambda and scan-status handling through SQS. These projects have given me practical experience building end-to-end features where usability and careful handling of sensitive information matter.

I've also contributed to an incremental migration of an onboarding backend from Express to NestJS, and maintained an Apollo Server BFF. Earlier, as project tech lead in a two-developer team, I built most of a React Native ferry-ticket app, which now has around 50,000 downloads. I'd be glad to bring this mix of frontend strength, backend delivery and hands-on product experience to Verdane Care's patient-facing work.

Thank you for considering my application. I'd welcome the opportunity to discuss how my experience could contribute to the Patient Experience squad.

Best regards,

Oskar
