Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor - Fleet Connectivity role. At Odrava Health Software, I work in QA automation and test infrastructure, owning GitLab CI pipelines and ephemeral environments for three teams. My strongest match is building practical delivery and test infrastructure that helps developers and QA validate changes quickly and consistently.

I built merge-request environments with an application, PostgreSQL, and seeded data, deployed through GitLab CI and Helm to a shared Kubernetes cluster. In a separate pipeline improvement, I profiled work across three teams, parallelized test jobs, added dependency caching, and separated end-to-end tests into their own stage. Average pipeline time fell from 38 to 14 minutes, while monthly CI runner costs fell by about 30%. I also created a Grafana dashboard from CI test results that helped teams reduce the flaky-test rate from 7% to below 1%.

My infrastructure experience also includes a personal three-node k3s cluster using Argo CD, with Prometheus, Grafana, Loki, Traefik, and cert-manager, plus Terraform provisioning for a small Hetzner VPS. I have explored AWS EC2 and S3 through personal free-tier use, but have not operated AWS in a work setting. At Odrava, the platform team operates the Kubernetes cluster; my access is at namespace level, and I create Helm charts for test environments. This has given me practical experience building and supporting infrastructure workflows while continuing to develop my cloud platform skills.

The challenge of connecting onboard train systems with backend services, while keeping the platform observable, reliable, and secure, is a compelling application of infrastructure engineering. I would bring a delivery-focused perspective, experience supporting several teams, and a clear communication habit, including writing the CI guide used in onboarding. I would welcome a conversation about how my experience could contribute to Corvale's fleet connectivity work.

Sincerely,
Marta Kowal-Brandt
