Professional Summary

Data scientist with 6 years in analytics and data science, including 4+ years as a data scientist, focused on experimentation, forecasting and customer analytics in a subscription business. Built operational forecasting and churn-scoring workflows using Python, BigQuery and dbt, with measurable business outcomes. Strong statistical foundation and experience translating business questions into analyses people act on; now moving toward machine learning engineering.

Experience

Data Scientist | Thistlebox, meal-kit subscriptions | Edinburgh *Feb 2022–Present*

- Design and analyse approximately 40 A/B tests per year for growth and product teams; built a sequential testing calculator used by approximately 25 colleagues.
- Built a six-week-ahead weekly recipe and region demand forecasting workflow using LightGBM and calendar, price and menu-position features. A scheduled notebook writes forecasts to BigQuery for operations to use in Looker; WAPE decreased from 23% to 14%, with estimated food waste reduction of 9%.
- Built an XGBoost churn propensity model scored weekly in BigQuery to target retention offers to top-decile customers. A 10% holdout validated a 2.1 percentage-point churn reduction in the treated group.
- Write production SQL in BigQuery and maintain dbt models for the analytics layer.
- Since 2025, have written pytest unit tests for forecasting feature code, reaching approximately 60% coverage.
- Built a Streamlit app for planning and analysing sequential A/B tests using statsmodels; wrote its Dockerfile. The data platform team handles deployment to Cloud Run.
- Present results to leadership monthly and have delivered internal “Stats for PMs” training three times.

Junior Data Analyst | Firth Energy Retail | Glasgow *Sep 2020–Jan 2022*

- Conducted customer segmentation and tariff analysis using R and SQL.
- Automated monthly regulator reports with R Markdown, saving the team approximately two days each month.

Additional Project

Image Classification Course Project *2025*

- Fine-tuned a small CNN in PyTorch on a public food-images dataset, achieving approximately 80% accuracy; a personal learning project completed as part of an online deep learning course.

Education

MSc Statistics | University of the Lothians | 2020 | Distinction
Dissertation: Bayesian hierarchical models for small-area energy demand

BSc Mathematics | University of the Lothians | 2019

Technical Skills

Python (pandas, scikit-learn, LightGBM, XGBoost, statsmodels, Streamlit); R (tidyverse, brms); SQL (BigQuery); dbt; Git; pytest; Docker; Vertex AI Workbench scheduled notebooks; Looker; A/B testing; causal inference; feature engineering; time-series forecasting; Bayesian statistics; PyTorch (course project).

Languages

English (native); Swahili (conversational)
