Daniel Okafor-Reyes

Backend Engineer

PROFESSIONAL SUMMARY

Backend engineer building production services in Java and Kotlin, with experience in REST API design, PostgreSQL, Kafka and AWS-hosted services. Delivered measurable improvements in data correctness and automated testing, and participates in production on-call. Seeking to move into a mainly Python backend role, building on Python scripting experience.

TECHNICAL SKILLS

Languages: Java 11/17, Kotlin; Python for data-fix scripts and Jenkins helpers; Go (learning).

APIs and frameworks: Spring Boot, REST APIs, OpenAPI 3, Spring Cloud Contract.

Databases and messaging: PostgreSQL, Oracle, Redis, Kafka, RabbitMQ, AWS SQS.

Cloud and containers: AWS EKS and S3, Kubernetes, Docker.

Testing and operations: Testcontainers, contract testing, production incident investigation, incident write-ups.

PROFESSIONAL EXPERIENCE

Backend Engineer | Tejo Insurance Tech | 2022-Present

- Build Java/Kotlin Spring Boot microservices using PostgreSQL, Kafka and Kubernetes.
- Designed a versioned partner quoting REST API using OpenAPI 3; added per-partner rate limiting and contract tests with Spring Cloud Contract. The API supported 12 broker partners and approximately 400,000 quote requests per month.
- Implemented a transactional outbox and idempotency keys for Kafka consumers to address duplicate claim records from at-least-once delivery. Duplicates fell from approximately 40 per week to zero over the following quarter.
- Built an internal Kotlin/Spring Boot service to render policy PDFs, using AWS S3 and SQS. Wrote the team's Kotlin coding guidelines for its first Kotlin service.
- Participate in on-call one week per month; handled a major Kafka lag incident in March 2024 and produced a write-up that received praise.
- Run the backend guild meeting every two weeks, since 2024. Work in an entirely English-speaking environment.

Software Developer | Viajar Online | 2019-2021

- Worked on booking and payments in a large Java application backed by Oracle. Increased payments-module test coverage from 35% to 70% using Testcontainers, enabling safer refactoring.
- Extracted email/SMS notifications from the booking monolith into a separate Spring Boot service using Java 11, RabbitMQ, Thymeleaf and Docker; gained experience with messaging, retries and operating separate services.

PERSONAL PROJECT

Gopher Weekend | Go CLI

Developing a command-line tool that compares OpenAPI specifications. Approximately 600 lines, hosted on GitHub; a learning project, not a production service.

CERTIFICATION

Oracle Certified Professional Java SE 11 Developer | 2020
