Hiring Team
Tessel Cargo Software

Application: Backend Engineer (Python) - Shipment Tracking Platform

Dear Hiring Team,

I am applying for the Backend Engineer position on your Routing & Tracking team. My experience connects two central aspects of this role: ingesting transport data and building reliable backend APIs. At Nordfels Telematik, I developed systems ingesting GPS data from 300k vehicles using Python, C++, PostgreSQL/PostGIS and RabbitMQ, and led six developers on the route-history product. That background provides a direct foundation for contributing to Tessel's carrier-event ingestion and shipment tracking services.

At Streamhaus, I was technical lead for the Python playback API and designed a Go entitlement service handling 120k requests per second at peak. Later, as Director of Engineering, I drove the migration from a Python 2 monolith to approximately 60 Python/Go services on GKE, with playback API availability improving from 99.5% to 99.95%. These projects provide relevant experience for improving the performance and reliability of your customer-facing tracking API. My technical toolkit also includes FastAPI, Kafka, AWS, Kubernetes, Terraform, Prometheus, Grafana and OpenTelemetry.

My most recent position involved substantial leadership responsibility, while I continued to write code every week, primarily internal tooling. My earlier principal engineering work included co-authoring a service template and Python style guide; I also built a Python test harness used by QA for eight years at Dataquelle. Tessel's emphasis on short design notes and reliability work connects closely with the RFC process, architecture reviews and on-call guidelines I introduced at Streamhaus.

I would welcome a technical conversation about how my telematics and backend engineering experience could contribute to Tessel Track and the Routing & Tracking team. Thank you for considering my application.

Kind regards,
Rafael Moretti-Klein
