Dear Verdane Care hiring team,

I am applying for the Full-Stack Engineer role on the Patient Experience team. I am a First Class Honours Computing graduate with hands-on experience from a software development internship, freelance work, and substantial academic projects building accessible web applications using React and TypeScript, alongside Node.js and PostgreSQL experience from my final-year project. I am drawn to Verdane Care's focus on putting patients first and making healthcare simpler and more human. I am a native English speaker.

During my software development internship at Harbourline Media, I worked on its React news site, resolving accessibility audit issues across more than 20 components, including keyboard navigation, colour contrast and ARIA labels. I also built a reusable, keyboard- and screen-reader-friendly image gallery, documented it in Storybook, and wrote unit tests with Jest and React Testing Library; Git/GitHub is also part of my technical toolkit. In my Tidewatch project, I developed a React and TypeScript interface and a Node.js/Express API backed by PostgreSQL. I tested the app with NVDA and VoiceOver, and it achieved a Lighthouse accessibility score of 100.

I would bring a practical, user-focused approach to building patient-facing features, with a strong interest in accessibility. My freelance work also includes building a Next.js booking website for a yoga studio, giving me experience with a wellness-related booking context. My experience with automated unit testing, Storybook and Git/GitHub, which is part of my technical toolkit, provides a useful foundation for contributing to a collaborative engineering team, and I am keen to deepen my experience with production backend services and the privacy requirements of health data.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience and approach could contribute to Verdane Care's Patient Experience team.

Yours sincerely,

Aiyana Brooks-Tan
