Dear Halden Pay Hiring Team,

I am applying for the Senior Data Engineer – Data Platform position. In my current role as a Test & Validation Engineer at Corvane Automotive Components, I developed a reusable Python data-processing workflow that parses TDMS and CSV output from six test rigs, applies specification-based data-quality checks to each channel, and generates standard report figures.

The tool processes about 2 GB each week, reduced report preparation from about three days to half a day per test and is now used by four other test engineers. I scheduled nightly runs with Windows Task Scheduler and wrote summary results to a staging table in the plant's SQL Server database; the table was created and managed by IT. I also built a Power BI dashboard on that data, used by around 15 validation and design engineers to review pass/fail trends and cycles to failure across product generations.

This experience has shown me the value of reusable, dependable data workflows and clear data-quality checks. I am transitioning into data engineering and am currently completing an online course, with six of nine modules finished. Alongside the course, I built a small Flask API over a public dataset using SQLite, Docker Compose and Git, giving me practical exposure to containerised local development and open-source tooling. I have taken ownership of making test-data workflows more dependable and reusable for engineering users, and have packaged the tool so four other test engineers can use it for their own tests. I would bring that experience, along with 12 years of engineering experience and fluent professional English, to a team building shared platform capabilities around the needs of analytics, data science and product colleagues.

Halden Pay's emphasis on shared capabilities, ownership and reducing unnecessary complexity resonates with my experience turning a repetitive reporting process into a reusable internal tool used by multiple engineers. I am happy to commute to Lisbon for the hybrid arrangement and would welcome the opportunity to discuss how my experience could contribute to the Data Platform team. I also offer fluent professional English and native Portuguese.

Thank you for your time and consideration.

Best regards,
Tiago Ferrão-Lindqvist
