Dear Verdane Care hiring team,

I am applying for the Full-Stack Engineer (TypeScript / React) role in your Patient Experience squad. My strongest experience is in accessible React interfaces, supported by TypeScript, Node.js/Express and PostgreSQL project work. Verdane Care's focus on making patient-facing software simple and accessible closely matches the work I have pursued in my internship, final-year project and freelance development.

At Harbourline Media, I fixed accessibility issues across more than 20 React components, addressing keyboard navigation, colour contrast and ARIA labels. I also built a reusable, keyboard- and screen-reader-friendly image gallery, documented it in Storybook and wrote unit tests with Jest and React Testing Library. My interest in accessibility began when a friend who uses a screen reader showed me the barriers she encountered online. Your WCAG 2.2 AA commitment gives that experience a clear connection to the patient-facing features this role supports.

For Tidewatch, my final-year project, I built a React and TypeScript app backed by a Node.js/Express API that cached public weather and tide data, with PostgreSQL storing user favourites. I tested it with NVDA and VoiceOver, achieved a Lighthouse accessibility score of 100 and received a First Class project grade of 82%. My freelance yoga studio website adds relevant booking experience: I used Next.js and Tailwind CSS to deliver a timetable and email-based booking requests. Together, these projects provide a foundation for contributing across the interface, API and database, while my professional experience to date is frontend-focused.

I would bring practical accessibility work, automated unit testing and experience helping approximately 30 students as a web development teaching assistant. I would welcome a conversation about how these strengths could contribute to your Patient Experience squad. My portfolio and GitHub links are included above. Thank you for considering my application.

Yours sincerely,
Aiyana Brooks-Tan
