Halden Pay Hiring Team

Application: Senior Data Engineer – Data Platform

Dear Hiring Team,

At Corvane Automotive Components, I developed Python tooling that turned test-rig files into checked data and report figures, reducing report preparation from about three days to half a day per test. Four other engineers now use the tool for their own tests. I am applying for Halden Pay's Senior Data Engineer – Data Platform role because its emphasis on reusable frameworks rather than one-off pipelines connects with this work and with my transition from mechanical engineering into data engineering.

The tool processes about 2 GB of TDMS and CSV data each week from six rigs, checks channels against test specifications and runs nightly through Windows Task Scheduler on a lab PC. It writes summary results to a staging table created by IT in SQL Server. I also query the test-results database for trends across three product generations and built a Power BI dashboard used by about 15 validation and design engineers. These projects have given me practical experience connecting data processing, quality checks and reporting to the needs of engineering colleagues.

My background is in engineering data automation rather than production cloud-platform ownership. Alongside my work, I have completed six of nine modules of an online data engineering course and built a local Flask and SQLite API, using Git and following a Docker Compose tutorial. I would bring hands-on Python and SQL experience, a disciplined approach to investigating failures and experience supporting colleagues through shared tools and apprentice training. Halden Pay's focus on reusable platform features provides a clear connection to the work I have already begun, while its learning budget and mentoring programme are relevant to this career transition.

I would welcome a conversation about how my automation and data-quality experience could contribute to the Data Platform team, and about the appropriate level for my current skills. Thank you for considering my application.

Best regards,
Tiago Ferrão-Lindqvist
