Dear Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor role. At Odrava Health Software, I own GitLab CI pipelines for three product teams and built merge-request test environments deployed with Helm to a shared Kubernetes cluster. The opportunity to help develop infrastructure for Corvale's new train fleet is an appealing way to apply this platform work in a new domain.

I reduced average pipeline time from 38 to 14 minutes and monthly CI runner cost by approximately 30% through parallelisation, dependency caching and pipeline restructuring. I also automated short-lived environments with PostgreSQL and seeded data, and maintain an approximately 900-test end-to-end suite whose flaky rate fell from 7% to under 1%. I documented how our CI works for onboarding.

My Kubernetes work is at the workload level: Odrava's platform team operates the shared cluster, while I have namespace-level access and build Helm charts for test environments. My personal homelab uses k3s, Argo CD, Prometheus, Grafana and Loki; I have also provisioned a small Hetzner VPS with Terraform. I would welcome the chance to discuss how this experience in CI/CD, automation and observability could contribute to Corvale's fleet connectivity work.

Sincerely,
Marta Kowal-Brandt
