Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. In my current role at Odrava Health Software, I own CI pipelines and build Kubernetes-based ephemeral test environments for three product teams. The opportunity to help shape infrastructure for Corvale's new train fleet is a compelling application of that delivery and platform-focused experience.

I have improved the teams' GitLab CI pipelines by profiling and parallelising test jobs, adding dependency caching and separating end-to-end tests into their own stage. Average pipeline time fell from 38 to 14 minutes, while monthly CI runner costs fell by about 30%. I also built a workflow that deploys a short-lived application and PostgreSQL environment for each merge request with Helm on a shared Kubernetes cluster, then cleans it up automatically. These projects have involved making delivery workflows easier for developers and QA teams to use, and documenting how the CI system works for onboarding.

Alongside my professional work, I built a three-node k3s homelab with GitOps deployments, Prometheus, Grafana and Loki, and provisioned a small Hetzner VPS using Terraform. My professional infrastructure experience is strongest in CI/CD and Kubernetes-based test environments; I have not used AWS or Terragrunt at work. My AWS experience is limited to EC2 and S3 basics through personal learning, and I am currently studying for the CKA, which I have not yet taken.

I would welcome the opportunity to discuss how my experience improving delivery systems, building test infrastructure and working across product teams could contribute to Corvale's fleet connectivity platform. Thank you for your consideration.

Marta Kowal-Brandt
