Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor role. I bring seven years of experience in QA automation, with the last two focused primarily on CI/CD pipelines, test environments and build tooling. At Odrava Health, I own GitLab CI pipelines for three product teams of around 25 developers. By parallelising test jobs, caching dependencies and separating end-to-end testing, I reduced average pipeline time from 38 to 14 minutes and monthly CI runner costs by approximately 30%.

I've also built short-lived merge-request environments using Docker Compose and, later, Helm on a shared Kubernetes cluster. These environments include the application, PostgreSQL and seeded data, and are automatically removed after merge or inactivity. The environments enabled QA and product reviewers to examine features before merge, with end-to-end tests running against each environment. Alongside this, I maintain an end-to-end test suite of around 900 pytest and Playwright tests and built CI dashboards in Grafana. My foundation also includes Linux, Bash, Python and PostgreSQL tooling. I also wrote the internal CI guide used for team onboarding and mentored two QA interns. This work has taught me to make infrastructure useful to the teams relying on it, and to improve reliability through automation, observability and clear documentation.

Professionally, I deploy Helm-based test environments with namespace-level access on a shared Kubernetes cluster. In personal projects, I used Terraform to provision a small Hetzner VPS and built a three-node k3s cluster with Argo CD, Prometheus, Grafana, Loki, Traefik and cert-manager. I also used the AWS free tier for foundational EC2 and S3 learning. My professional infrastructure work has centered on CI/CD and test environments, while my Terraform and cloud work has been in personal projects.

Corvale's work connecting a new train fleet with cloud services is an exciting infrastructure challenge. I'd welcome the opportunity to discuss how my experience building and improving delivery infrastructure could contribute to Corvale's engineering-led Fleet Connectivity team through practical CI/CD, Kubernetes test-environment, observability and documentation experience. I would bring practical experience in CI/CD, Kubernetes-based test environments, observability and infrastructure automation, with a strong foundation in delivery infrastructure and a clear focus on developing further in cloud platform engineering.

Thank you for your time and consideration.

Marta Kowal-Brandt
