Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I'm a QA automation engineer moving toward DevOps and platform engineering, with recent experience building and improving CI infrastructure and test environments used by three product teams.

At Odrava Health Software, I own GitLab CI pipelines supporting around 25 developers. I reduced average pipeline time from 38 to 14 minutes and monthly runner costs by about 30% by profiling and restructuring jobs, and built short-lived merge-request environments using Docker Compose and Helm on a shared Kubernetes cluster. These environments give teams a place to review features and run end-to-end tests before merge. I've also collected test results in PostgreSQL and built Grafana dashboards to help teams identify flaky tests. This work has taught me to make infrastructure useful to the teams who depend on it, and to communicate how it works; I authored an internal CI guide used for onboarding and mentored two QA interns.

I'm building my infrastructure-as-code and platform skills through personal projects, including a k3s homelab with GitOps and a Hetzner VPS provisioned with Terraform. My cloud experience is currently learning-focused: I've used AWS free-tier EC2 and S3, and I have not used Terragrunt or managed production cloud infrastructure. I would bring a practical foundation in CI/CD, Linux, Kubernetes-based test environments, monitoring and automation, while continuing to develop toward broader infrastructure ownership.

Corvale's work connecting a new train fleet with cloud services is compelling to me because it combines infrastructure, system design and close collaboration across teams. I'd welcome the opportunity to discuss how my experience improving delivery infrastructure and supporting product teams could contribute to the Fleet Connectivity team.

Thank you for your consideration.

Marta Kowal-Brandt
