Dear Tessel Cargo Software Hiring Team,

I'm applying for the Backend Engineer position on the Routing & Tracking team. I bring seven years of backend engineering experience building and operating production services, primarily in Java and Spring, with hands-on work in event-driven systems, REST APIs, relational databases, and cloud deployments. Tessel's focus on dependable shipment tracking and clear engineering ownership particularly appeals to me.

At Tejo Insurance Tech, I develop and maintain seven Java 17 / Spring Boot microservices. I designed and versioned a REST API used by 12 broker partners, and built Kafka-based claims workflows using idempotent consumers and an outbox table to prevent duplicate records. I also reduced quote endpoint p99 latency from 1.8 seconds to 450 milliseconds by adding Redis caching and resolving JPA N+1 queries. This experience in event processing, API reliability, and production performance is relevant to the challenges of ingesting carrier events and improving a live tracking platform.

Earlier, I built booking and payment features in a Java / Spring MVC application backed by Oracle, wrote Testcontainers integration tests that raised payments-module coverage from 35% to 70%, and helped extract a notifications service using Spring Boot and RabbitMQ. I deploy services to Kubernetes on AWS EKS with Helm and Jenkins pipelines, and participate in an on-call rota. These experiences have given me a practical grounding in automated testing, CI/CD, cloud deployment, and operating services in production. My professional backend experience is in Java rather than Python, alongside basic Kotlin; I would bring that comparable-language foundation to the role.

I would welcome the opportunity to contribute to Tessel's tracking services and to a team that values dependable products, clear communication, and ongoing reliability work. Thank you for considering my application. I look forward to discussing how my experience could support the Routing & Tracking team.

Kind regards,
**Daniel Okafor-Reyes**
