Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I'm a QA automation engineer with seven years of experience, including more than two years focused on CI/CD pipelines, test infrastructure and build tooling, and I'm looking to move into a DevOps or platform engineering role full time.

At Odrava Health, I own GitLab CI pipelines for three product teams and built short-lived merge-request environments using Helm on a shared Kubernetes cluster. These environments include the application, PostgreSQL and seeded test data, and are automatically removed after merge or 48 hours of inactivity. I also improved pipeline performance from 38 to 14 minutes on average, while reducing monthly CI runner costs by about 30%. This work has involved coordinating infrastructure and testing needs across teams and making systems easier for others to use and maintain.

Alongside my work experience, I've built a personal three-node k3s cluster with GitOps deployments using Argo CD, monitoring with Prometheus, Grafana and Loki, and Terraform provisioning for a small Hetzner VPS. I'm also studying for the Certified Kubernetes Administrator exam. Corvale's work connecting a new train fleet with cloud services is especially interesting to me as an opportunity to contribute to infrastructure that supports connected devices and reliable digital services. I would bring a practical, analytical approach, a habit of documenting systems for others, and experience taking infrastructure improvements from implementation through team use.

Thank you for considering my application. I'd welcome the opportunity to discuss how my CI/CD and test-infrastructure experience could contribute to Corvale's Fleet Connectivity team.

Kind regards,
Marta Kowal-Brandt
