Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I have seven years of experience in QA automation, with my recent work focused on CI/CD pipelines, test infrastructure and platform tooling. I'm now looking to move into DevOps or platform engineering work, and the opportunity to help build infrastructure for Corvale's new fleet particularly interests me.

At Odrava Health Software, I own GitLab CI pipelines for three product teams of around 25 developers. I improved average pipeline duration from 38 to 14 minutes through profiling, parallelisation, caching and changes to the end-to-end test stage, while reducing monthly runner costs by about 30%. I also built short-lived merge-request environments using Docker Compose and Helm on a shared Kubernetes cluster, with application services, PostgreSQL and seeded data deployed through CI and removed automatically after merge or inactivity. This gave QA and product teams a repeatable way to review features before merge, while CI ran end-to-end tests against each environment. This work has given me hands-on experience making infrastructure repeatable and supporting teams with environments that are easier to test and review.

Alongside this infrastructure work, I built Python and Bash tooling, PostgreSQL-backed CI result collection, and Grafana dashboards that helped teams identify flaky-test patterns; I also use Prometheus, Grafana, Loki, Argo CD and cert-manager for monitoring, GitOps and TLS in a personal k3s homelab. In my personal projects, I run a three-node k3s homelab with Argo CD, Prometheus, Grafana and Loki, and have used Terraform to provision a small Hetzner VPS. My Terraform work is personal, including provisioning a Hetzner VPS, and my AWS exposure is personal learning with EC2 and S3 basics rather than production cloud operations. At Odrava, my Kubernetes work is at namespace level on a shared cluster. I have led improvements to shared technical workflows, documented the CI system for onboarding, and mentored two QA interns.

Corvale's technology-first approach and its investment in a new train fleet make this an exciting opportunity to apply my infrastructure and automation experience to a platform with real operational needs. I would welcome the chance to discuss how my background in CI/CD, repeatable test environments, observability of engineering workflows and platform tooling could contribute to the Fleet Connectivity team.

Thank you for your time and consideration.

Marta Kowal-Brandt
